

# MARTIN® SC16 SECONDARY BELT CLEANER

A TRUSTED BELT CLEANER

## THE TRUSTED

### Martin® SC16 Secondary Belt Cleaner

- SC16 has a unique installation and removal guide/cradle for easy removal and replacement of blade carrier tube, especially when servicing cleaners on wide belts.
- Rugged belt cleaner construction withstands punishing applications, like high-speed belts and high-tonnage loads.
- Rubber blade mountings maintain constant belt pressure - irrespective of belt profile or irregularities.
- Rubber blade mountings allow blades to deflect when encountering metal belt fasteners and accommodate reversing belts.

- Compact secondary belt cleaner design allows installation in close quarters; narrow profile resists material buildup.
- Option of a double or single blade SC16. On belts demonstrating "above average" carryback after the discharge point, a double SC16 can be installed.
- Blade types
  - HAR - Normal applications\*
  - ARB - Corrosive applications\*
  - HAR Sandwich - Normal application\* with Clip Joints
  - ARB Sandwich - Corrosive application\* with Clip Joints

\*Normal applications : Coal, cement, iron ore etc.

\*Corrosive applications : ROM, discard, phosphates etc.
